Texas Computer Works Joins Petris' ASP Service - PetrisWINDS NOW! to Provide its Production Management System via the Internet

HOUSTON, March 13, 2003 - **Texas Computer Works, Inc. (TCW)** will be providing its new production evaluation application, **ProdEval**, via the Internet. This product will be offered on a monthly subscription basis via **PetrisWINDS NOW!™** - a premier application services provider (ASP) to the oil & gas and energy industries.

Texas Computer Works will offer its **ProdEval** software that combines a production management tool that captures and analyzes production data with an economics module to perform a variety of cash flow analysis. This program was designed to import production data through **TCW's** own data collection system, SCADA, direct entry, public data sources or company specific data stores. Once captured, data can be exported to most leading oil & gas accounting systems and it can be used to forecast future production rates and reserve life. According to Harold Eversen, President of **Texas Computer Works**, "Being able to efficiently manage production information helps to separate the more profitable companies from the rest. Without a good system in place real opportunities to increase stockholder value are lost. **TCW's** production management software is designed to help companies make more timely and better-informed decisions about their largest asset, their producing properties. Being able to make this available through **PetrisWINDS NOW!** makes it even more convenient and cost effective."

Operators will now have immediate access to this exciting new application with only one **PetrisWINDS NOW!** contract. This Web-based application will help oil & gas producers reduce their internal support requirements and extend the life of existing hardware. The low entry pricing structure also helps to reduce a company's capital expenditures and makes using this product a part of a more efficient operational process. By making this production package available via the Internet, operators can also benefit by having anywhere - anytime access to critical production and financial data.

Texas Computer Works joins a growing list of best-in-class independent software vendors offering their software to the energy industry through **PetrisWINDS NOW!** This Web-based work environment features vendor neutral, on-demand software to meet the different business needs of a user organization. **Petris** can provide their ASP services via the Internet or create and manage a similar solution behind a company's firewall.

"**Texas Computer Works** new application greatly enhances the solution set we can provide our clients," says Jim Pritchett, Petris CEO. "**Texas Computer Works** is a good complement to our growing body of software and services offered to the oil & gas industry. Their specialized software will benefit those in the production engineering and financial segment of the industry by helping them perform with greater efficiency and lower costs. "

Texas Computer Works is based in Houston, Texas and offers a series of software programs to the oil & gas industry. Many of these other products will be added to the **PetrisWINDS NOW!** platform in the coming months giving production & reservoir engineers, financial analyst, field personnel and marketing managers immediate access to valuable real time production information. **TCW** was founded in 1984 and has a client base throughout the world. In addition to its software, **TCW** provides training and support to help producers manage production operations. Their focus has been to provide software that is technically complete, easy to use, and very affordable to their clients.
