### Petris' WLMS Achieves 100% Compliance with PPDM 3.7 Well Log Data Model

**HOUSTON, TX – January 13, 2005** – Petris Technology, Inc., the energy industry leader in the development of vendor-neutral data management and exchange technologies, has achieved full compliance with PPDM 3.7 Well Log Management for its PetrisWINDS Enterprise WLMS Version 3.0. This certification ensures a high level of conformance between the WLMS product and the published PPDM standards. Petris joins a select group of companies whose products have achieved PPDM certification, which helps energy companies provide for more straightforward implementation of new technology through use of standard data definitions that have broad acceptance in the marketplace.

PetrisWINDS Enterprise is a software platform that consolidates a diverse array of data sources into one web-based management system. Its patented Dynamic Common Model vastly simplifies the process of incorporating new data sources while ensuring that no data is lost, when compared to all other methods in use today for interconnecting data sources.

The PPDM 3.7 data models can be used by companies as comprehensive repository of valuable down-hole information. It may also be used as an archive repository or as an operational data storage site. With the PetrisWINDS Enterprise Adapter, in-house applications can with draw well log data and automatically convert and insert it into application specific data models with a full scope of data.

Complete details of the compliance may be accessed through the PPDM Web site at
