Full Core Data Support Now Available in Recall 5.2

HOUSTON, TX – May 9, 2008 – Petris Technology, Inc., the energy industry leader for vendor-neutral data management and exchange technologies, is excited to announce the release of the Recall Core Data Management module. Now, core data is tightly integrated with all other depth and time based borehole data, and it can be interactively visualized with Logscape.

Recall 5.2 features enhanced core data support; the new core data functionality will be offered as an additional module in the Recall suite. The storage, management, reporting and viewing of core data in Recall has been extended and includes core intervals, core boxes, core images and routine core data measurements, SCAL experiment data and any type of core description.

The new Recall Core Data Management module will come packaged with everything required to load, store, manipulate and export the huge variety of data associated with cores and core experiments. Specifically, this includes core data loaders and exporters, core data storage and management, zonal data editor and utilities along with full support for the visualization of all core data types in Logscape.

"Traditionally, the management of core data has been a neglected aspect of corporate database systems due to the complexity and variety of the data types involved," said Chris Hamley, VP of Well Data Products. "We have worked closely with some of our major Recall clients over the last two years to develop a comprehensive solution for the enterprise-scale storage, visualization, and management of all types of core data. Core data can now be full integrated with all of the other borehole data types supported by the Recall system."

About Petris Technology, Inc.:

Founded in 1994, Petris provides practical, real-world IT-based solutions for energy clients leveraging its expertise in data management, application hosting, geospatial information systems (GIS) and professional services. Through a unique vendor-neutral approach and expertise in service-oriented architecture, Petris designs and deploys innovative technology that integrates data from diverse data stores to enable better decision making and application transparency. Taken together, Petris is leading the way into a new era in integration, data and application management. <http://www.petris.com>
