

Petris Expands Electronic Well Log Management Market Share in Canada *Delivering system to leading government regulatory body*

HOUSTON, TX, May 10, 2010 – Petris Technology, Inc. (www.petris.com), a leading supplier of data management and geosciences applications to the global oil and gas industry, expands its presence in the Canadian market with the award of an electronic well log management system to an independent, leading government regulatory agency. The implementation of this solution will allow the agency to enhance its ability to regulate the safe, responsible, and efficient development of provincial energy resources.

The solution combines the PetrisWINDS Recall wellbore database and industry leading applications for petrophysics, geology, and geomechanics with the PetrisWINDS Enterprise data integration system, providing a framework that will integrate with the agencies existing infrastructure. The government regulatory agency has chosen this Petris solution as part of an ongoing plan to improve collection and dissemination of data, and to continue to inspire public confidence.

“Because every solution has an implementation priority dictated by unique client needs, we accommodate this by assuring that the Petris solutions framework is vendor neutral, uses an open architecture and supports open standards, promoting the reality of “best of breed” or “fit for purpose” application environments. The benefits of this approach are significant: utilization of the best applications available, continued value from prior investments and faster and less disruptive implementations”, says Jim Pritchett, Petris president and CEO.
