

Petris Announces the Release of PetrisWINDS Analytics (PWA)

Business intelligence tool for energy company performance management and measurement

HOUSTON, TX, May 18, 2010 – Petris Technology, Inc. (www.petris.com) is pleased to announce the release of PetrisWINDS Analytics (PWA), a business intelligence tool that provides energy companies the freedom to manage and measure performance across the entire organization through rich interactive reports and online dashboards derived from realtime access to critical technical and financial data. Petris is a leading supplier of data management and geosciences applications to the global energy industry.

Developed specifically for the needs of exploration and production departments and oil and gas executives, PetrisWINDS Analytics transforms massive amounts of enterprise-wide data into manageable reports that aid in pinpointing trends and patterns. This enables managers to concentrate on making increasingly effective decisions.

PWA takes advantage of the unique data integration provided by PetrisWINDS Enterprise (PWE), a rich set of application adapters and Information Builders' WebFOCUS business intelligence platform to deliver real-time access to critical information derived from both technical and financial data.

"The lifeblood of a company is its business intelligence," said Jim Pritchett, Petris CEO. "With PetrisWINDS Analytics, oil and gas company managers can manage and measure performance through viewing trusted data combined from multiple sources in one report or on one dashboard."

PWA will debut at the 14th International Conference on Petroleum Data Integration, Information and Data Management held May 18-20, 2010 in Houston, Texas.
