

Petris Significantly Expands PetrisWINDS Enterprise's Data Footprint *Strategic Partnerships Broaden Capabilities in Oil and Gas Data Management and Application Interoperability*

HOUSTON, TX, May 18, 2010 – Petris Technology, Inc. (www.petris.com), a leading supplier of data management and geosciences applications to the global energy industry, is pleased to announce that [PetrisWINDS Enterprise \(PWE\)](#) will now support a significantly larger range of adapters, including those offered by OpenSpirit, Information Builders, Energy IQ, as well as the PPDM 3.8 international standard. PWE provides data management and application integration giving energy companies the freedom to perform advanced data management for data federation, search, workflow management, web services, data quality and business intelligence across the entire E&P workflow.

Adapters provide integration between PWE and other applications, databases, or data stores, such as [PetrisWINDS Recall](#), [PetrisWINDS DrillNET](#), [PetrisWINDS Operation Management Suite](#), GeoFrame, OpenWorks, SeisWorks, Geolog, Petra, and more. An adapter implements application specific business rules, honors application security rules, and handles requests sent by PWE to perform a requested task. PWE is scalable and can grow as data management requirements within a company evolve.

Petris has partnered with OpenSpirit to expand its PWE solution with the integration of the OpenSpirit data and application adapters for the PWE framework. Open Spirit customers will benefit from the fast and Google-like search capability of PWE with the ability to invoke OpenSpirit Selection events and publish them to other OpenSpirit enabled applications.

Through a partnership with Information Builders, Petris now has the capability to integrate PWE with the iWay adapter software providing access to over 300 adapters including SAP and J.D. Edwards. Petris has partnered with Energy IQ to integrate their products into PWE, allowing the transfer and transform of IHS US and international commercial data feeds into multiple applications. Petris also expands its commitment to PPDM by delivering an enhanced well header adapter for PPDM version 3.8.

“As applications evolve and workflows require improved integration, the need for effective data management and data collaboration becomes increasingly critical to business success. These key partnerships reinforce Petris's continued commitment to providing the best enterprise information solutions available in the market”, says John Wearing, Petris vice president.

Combined with Petris' existing suite of Adapters, PWE now has the broadest "footprint" of application and data type adapters. This rapid expansion of connectivity options is made possible because of PWE's patented Dynamic Common Model and use of Service Oriented Architecture.
